The new Calibrachoa is a product of a planned breeding program conducted by the Inventor in Higashiomi, Shiga, Japan. The objective of the breeding program is to create new uniform and freely-branching Calibrachoa cultivars with attractive and unique flower coloration. The new Calibrachoa originated from a cross-pollination made by the Inventor in Higashiomi, Shiga, Japan in May, 2003, of a proprietary seedling selection of Calibrachoa sp. identified as code number E04-1316, not patented, as the female, or seed, parent with a proprietary seedling selection of Calibrachoa sp. identified as code number E04-1608, not patented, as the male, or pollen, parent. The new Calibrachoa was discovered and selected by the Inventor as a single flowering plant from within the progeny of the stated cross-pollination in a controlled environment in Higashiomi, Shiga, Japan. Asexual reproduction of the new Calibrachoa by vegetative cuttings in Higashiomi, Shiga, Japan since May, 2005, has shown that the unique features of this new Calibrachoa are stable and reproduced true to type in successive generations.Q: Safari 5 OS X can not load local html 2d92ce491b
